

**Press release****Multijob MJX – 360° complete rotation Backhoe-loader**

The **MULTIJOB MJX** is a:

A CONTINUOUS ROTATION BACKHOE LOADER (360°)

Natural evolution of a multipurpose civil works machine, MULTIJOB MJX is based on a unique concept in the world as no other machine offers all these features.

Definitively versatile, the MULTIJOB MJX offers in standard a telescopic loader, a full rotation excavator, 4-drive and steering wheels, quick attachment on shovel and digger sides with translation and steering on both working positions.

Relying on its know how in innovation, Haulotte Group has designed a unique range of civil works equipments called MULTIJOB MJX with many benefits.

➤ **Full rotation excavator:**

Benefit: the work is easier thanks to the real excavator, single or knuckle boom with a telescopic loader.

The MULTIJOB MJX is perfect for narrow working areas, especially in urban road-works as only one road lane is occupied. The MULTIJOB MJX can work and unload in the same alignment.

It can load and unload by itself. The operator can, carry all the tools in the bucket. On this way, the worksites are cleaner; the operator is more productive and the big wastes can be handled in total safety.

The back and forth of the machine are limited as you can use the loader when working with the excavator.

➤ **Telescopic loader**

Benefits: To fill up, the bucket does not require neither tyres grip nor engine power. The pressure creep of the telescope (9 Tons) permits to fill up the bucket with a reduced power. Therefore, the consumptions are lower compared to equivalent equipment.

Horizontal outreach as well as maximum height are among the highest in the market. This permits to unload in all possible configurations and more weight balanced in the bucket.

Trench backfill is safer as the MULTIJOB MJX is away from the edge in order to prevent eventual land collapses.

- **Steering and driving functions are available on both working positions of the MULTIJOB MJX (excavator and loader).**

Benefits: The operator can manage in any circumstances the MULTIJOB MJX. He gains so productivity compared to a standard backhoe loader.

Back and forth and movements of the MULTIJOB MJX are more precise as you can drive from the working position you want. The job is well done and safety improved.
